Keywords: Local Red Culture, Medical Students, Patriotism Education

Abstract: The university age is the golden period and watershed of learning the way of "learning" and shaping the ability of "running the country and ensuring the state". Therefore, schools should hold high the banner of the Red Army revolution, sing the melody of the red songs, adhere to the "red culture" as the core content and basic elements of the patriotic education of college students, carry out the "inheritance of red genes, carry forward the revolutionary spirit" seriously, fine, true, in order to constantly inspire, awaken and inspire the students. In the context of the current epidemic, how to better integrate red culture into the patriotic education of college students, and how to cultivate outstanding college students with firm ideals and beliefs for the Party and the socialist motherland? How to carry out the "red old education", the "red" gene, especially the local red culture more effectively into the spirit of the blood of college students? These are important issues worthy of deep thinking and serious practice.

Chinese red culture refers to the communist party of China leads the people in the revolution and construction, in the process of the formation and development of socialism and communism as directed, combines marxism-leninism with the concrete practice of China, eclectic, formed by the excellent cultural achievements of ancient and modern, Chinese and foreign sum of civilization, as a result, she is not only the characteristics of the objective nature of our party, and inherently provisions of the our party's principle of the nature of the recursive and inheritance. Inheriting the red gene is not only the urgent need of the patriotic education of college students in reality, but also the inevitable requirement of history, because the life of the Party and the red country and the red gene are in the same line. Combining the resources of the northeast of Jiangxi red square ambition the quick spirit as the core of regionality and mining in the northeast of Jiangxi red revolutionary base resources, explore the square ambition the quick spirit into the era of medical students' patriotism education significance and the effective path to the new era of medical students with red culture edification, push the new era of medical students ideological and political education and improve medical students' professional quality, tree firmly to heal the wounded and rescue the dying spirit of humanitarian, motivate students vying for a new era with red medical spirit and excellent technical staff.

1. Consistency of Red Resources in Northeast Jiangxi in Patriotic Education of Medical Students

The history of the northeast Jiangxi revolutionary base is an important part of the history of the Chinese Soviet movement. During the agrarian revolution period, as the northeast barrier of the central Soviet area, a large number of outstanding representatives emerged in the revolutionary base area of northeast Jiangxi, such as Fang Zhimin, Huang Dao, Shao Shiping, Wu Kehua, etc. Many famous patriotic education bases have been formed, such as the memorial to the advance team of the Chinese Workers' and Peasants' Red Army, the memorial to the revolutionary martyrs in the Shangrao concentration camp, and the memorial to Fang Zhimin. Dig through the square ambition the quick spirit as the core of Jiangxi red culture in northeast China, the northeast of Jiangxi red

culture and the organic combination of patriotism education among medical students, and to help medical students set up the correct humanitarian spirit "through" and heal the wounded and rescue the dying, to form the medical students' noble professional ethics accomplishment, and promote the quality of the new age health care development.

1.1 Inheritance of red culture in health schools of the Soviet area in Northeast Jiangxi. In order to train the medical and health personnel of the Red Army, the Soviet Health School of Northeast Jiangxi was established in the second half of 1930. The medical and health personnel cultivated by it made immortal contributions to the development of the medical and health undertakings in Northeast Jiangxi, and it was the earliest health school established in the history of our Party. As on the history of the party have health school as soon as the only medical colleges in the northeast jiangxi, its cultural connotation, form deep red, contains a rich revolutionary spirit and the massive historical elements, has the responsibility and mission to excavate and carry forward the northeast of jiangxi red resources and culture, actively and organic combination of patriotism education among medical students, and in promoting the older generation of medical worker does not fear the difficulty, have the courage to struggle the spirit at the same time, improve the new era of medical students don't fear frustration and the ability to overcome difficulties, the stories with the revolutionary martyrs and their typical deeds infection, cultivate their patriotic feelings, their ideal faith.

1.2 The active role of the patriotic education bases in northeast Jiangxi. Northeast jiangxi as the core area of fujian and zhejiang to the Soviet revolution, many revolutionary stories, there's a lot of patriotism education bases, such as shangrao camp site, square ambition the quick former residence, square ambition the quick memorial hall, the Chinese red army of workers and peasants north contingent of anti-japanese monument, etc can be directly used to the unique characteristics of the northeast of jiangxi patriotic education base, has the characteristics of low cost, good effect. Through on-the-spot heard red story feeling mission, his mind with patriotism education base of patriotism education for medical students the advantages of the carrier, combining the school classroom education the social life, is not only beneficial to enrich education content, expand education field of vision, increase the width and thickness of the education, and is beneficial to both inside and outside the "interaction" in the college students gradually to temper the revolutionary consciousness, the revolutionary spirit and action.

1.3 The positive effect of Fang Zhimin's spirit. In the fight against COVID-19 in 2020, we have all felt the greatness of our health care workers. It is their selfless dedication and retrograde life and death that have enabled them to win the battle against COVID-19. Just like the admission oath of medical students, medical workers are doomed to be selfless and dedicated, which is the due meaning of the patriotic education of medical students. Fang Zhimin's spirit of "patriotism, poverty, creation, dedication" and the doctor's virtue have enthusiasm. The first is to stimulate the patriotic enthusiasm of medical students with Fang Zhimin's patriotic spirit, and the teaching mode is changed into interactive mode to enhance the understanding of medical students' patriotic spirit. Secondly, Fang Zhimin's spirit of poverty helps him to set up a scientific outlook on life and a noble sentiment of "rather poor than rich", which is conducive to improving the patriotic education quality of medical students and improving their ideological realm. Thirdly, Fang Zhimin's creative spirit is used to guide medical students to form innovative thinking that dares to break the old rules and grow into medical and health talents that meet the needs of the new era. The fourth use of Fang Zhimin's dedication spirit, to educate college students to correctly deal with the relationship between individual and collective, local and global, to guide college students to establish firm "spare no effort to eliminate human diseases, rescue the dying and heal the wounded, for the development of the motherland's medical and health cause and human physical and mental health" ideal and belief.

2. The Effective Path of the Red Resources in Northeast Jiangxi in the Patriotic Education of Medical Students

Regional red resources is the "soul" medical students patriotism education resources, how to

square ambition the quick spirit as the core of northeast jiangxi red culture into a medical college student patriotism education, the high quality promoting medical students patriotism education work, is in urgent need of medical college students' ideological and political education work to solve problems. We should fully explore the revolutionary spirit and touching stories contained in the red resources in northeast Jiangxi, give full play to the unique role of the red resources in northeast Jiangxi, innovate the transmission forms and modes of the red resources, and further improve the effectiveness of the patriotic education for medical students.

2.1 Insist on introducing "red culture" into the classroom. Regional red culture is the profound embodiment of regional excellent historical and cultural deposits, especially as an old revolutionary base area, this kind of red culture represents the unique spiritual temperament of the region. In school, the class is to carry out the education teaching activities of "position" and the "commanding heights", the teacher must attach great importance to education, the "red culture" is good at through various ways and methods, combined with the specific subject teaching, with red revolutionary road, revolutionary culture and spirit as the main line, the harmony of state and events, character and spirit for the integration of knowledge system, the local red culture education in the classroom activity actively penetration, lets the student gradually perceive and consciously accept the "red culture", inheriting the "red" spirit, carries forward the spirit of patriotism.

2.2 Adhere to the patriotic education practice of medical students. In the current situation of "great opening up, great reform and great development", school education should keep pace with The Times, consciously accept the "open" elements of social life and effective cultivation. We walked along the revolutionary predecessors to move on to revolutionary relics and monuments to the red carrier, organize the students and guide students out of the campus, by visiting, consult, listening, viewing and other forms, actively carry out education with the red tourism and other activities, such as visited the old shangrao camp, esb patriotism education base, fujian and zhejiang revolutionary martyr memorial hall, the Chinese red army of workers and peasants contingent of anti-japanese monument of patriotism education base, such as north to influence student's thought emotion and osmosis.

2.3 Adhere to creating a patriotic education atmosphere for medical students. Red culture and medical colleges have their own characteristics. The organic integration of regional red culture and characteristics of medical colleges can maximize the leading role of red culture. First, the colleges combined with the characteristics of their subject courses, with the northeast Jiangxi red as the background color, medicine as the background to develop the red culture education system; Second, innovative cultivation methods, through a variety of educational carriers and a strong educational atmosphere to make medical students consciously accept patriotic education. For example, college students are organized to go to old revolutionary base areas to carry out themed education activities such as "learning revolutionary traditions and serving the people in old revolutionary base areas". Traditional publicity methods such as window, bulletin board and blackboard newspaper are effectively paid attention to, and new media publicity forms such as "two micro and one end" are well used to form campus publicity force and enrich students' patriotic feelings. Third, deepen the training content, through the northeast of jiangxi red culture related book reader, northeast jiangxi red listening of the story, the visit of the patriotic education base, the northeast of jiangxi red culture on organizational learning activities such as speech, composition, the study of northeast of jiangxi red culture share will read, organize students to watch on the northeast of jiangxi red culture, film and television works, deepen the understanding of the northeast of jiangxi red culture, to improve medical students' ideological understanding and cultivation of patriotism education.

3. Endnotes

As the ideological and political workers of the medical colleges in northeast Jiangxi, we have the responsibility to integrate the red culture of northeast Jiangxi into the patriotic education of the medical students, which is an active exploration to integrate the regional red culture into the patriotic education of the medical students, and it is also a witness to the students' patriotism spirit under the epidemic situation. In the process of promoting regional red culture, and to explore the

form of patriotic education of university students under the new situation, build medical students red culture education system, innovation, cultivation mode, deepen the cultivation content, broaden the scope of cultivation, system of education, culture, typical demonstration in theory and practice development for cultivating way, give full play to the main land important class, efficient structures, the Internet, the campus, cultivate base "the trinity" network, improve medical students' patriotism spirit and selfless dedication spirit, enhance the medical students' cognition to own value and social responsibility, enhance its into the work face and the ability to deal with ethical dilemmas and value conflicts, To be a medical and health talent with socialist core values in line with the development needs of medical and health undertakings in the new era.
